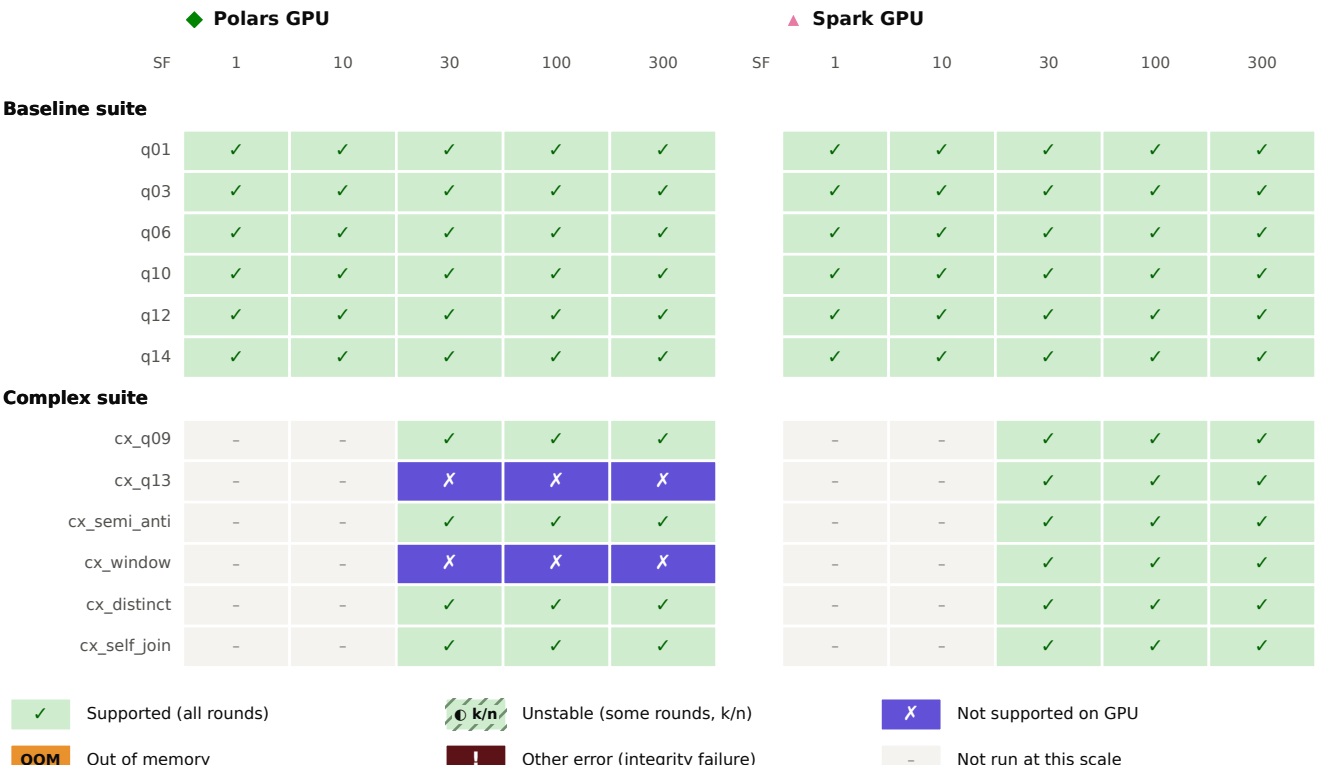
RQ4 GPU coverage: which queries run on each GPU engine, by scale



Black outline: failure not pre-declared (design section 8 pre-declares cx_q13 and cx_window on Polars GPU). Not supported (✗) and out of memory (OOM) are coverage outcomes (A1); hatched: unstable coverage, a coverage outcome in some rounds only, excluded from every contrast in all rounds. Other error (!) is an integrity failure: it fails its round (section 7), so an accepted round should show none.
